

Grass you dream of!

The root to your success.

NoMowGrass

-  Use NoMowGrass anywhere you want to reduce maintenance, can't water, can't (or don't want to, or don't have time to) mow. NoMowGrass grows to a soft uniform appearance that is soft and cool to walk on even on the hottest days.
-  NoMowGrass is easy to plant over an existing lawn or on bare soil.
-  NoMowGrass is similar in price as other grasses for a small amount goes a long way! – Equal to 4 to 5 times the amount of other varieties of grass seed.
-  Once established, NoMowGrass will use less water and energy than traditional high maintenance grasses.
-  Annual ryegrass has been added to our mixture to provide quick ground cover for the first year. If planted on bare soil, the annual ryegrass will increase cutting for the first growing season.
-  NoMowGrass mixture contains 80% inert matter to help distribute seeds evenly due to the smaller size of the NoMowGrass seed.

What is NoMowGrass?

NoMowGrass is a short growing lush green grass with less watering requirements. NoMowGrass does well in shady areas but not dense shade.

Whether you are looking for a grass to naturalize and never mow or looking for a lower maintenance grass for your home, cottage, or business, NoMowGrass will provide a lifetime of enjoyment rather than add to your work load.

Why Choose NoMowGrass?

NoMowGrass is a grass for lawns where low maintenance is desired. Unlike other advertised low maintenance products on the market, NoMow Grass is not a fescue and will not grow to heights of 9"+. Our bent grass typically only grows to 3" - 6" though adding chemicals containing growth hormones will increase its height. NoMowGrass requires little attention - no fertilizing, less time mowing and watering.

Like all short grasses - you reduce the cover for snakes, rodents and insects by keeping your lawn short. NoMowGrass is a great lawn system for vacation homes and for homeowners who can't mow.

Watering is reduced since NoMowGrass creates a mini-environment when left un-mowed it shades its thick root system, holding moisture in. Our Northern Hardy NoMowGrass is the softest, coolest grass your bare feet have ever been on!

NoMowGrass Benefits:

Reduce Work - Less mowing!

- Initially, the grass may grow upwards and may require a single mowing (at 3 inches) to promote side-ways growth.
- Mixed grasses may require a light clipping every other month to every 3rd month depending on your preference for your lawn's appearance.

Reduce Watering (needs approximately an inch a month to stay green)

- To establish grass after seeding, water the seeded area every day for 15 minutes both morning and evening until the seed is sprouting and then every other day for 7 to 10 days.
- To reduce watering needs - do not mow. This will increase self shading of soil and encourage thick root growth to retain moisture. If mowing is desired, set mower at the highest setting (minimum 3 inches) and use mulching blades whenever possible.

Reduce Chemical use

- NoMowGrass roots are very dense and will limit weed growth without using chemicals.
- When using chemicals, it is recommended to spot spray following the manufacturer's instructions.
- If spraying your entire yard using a herbicide, use at half strength and ensure that it is free of crabgrass or quackgrass killer and is suitable for use on bent grasses, otherwise any warranties are void.

Overseeding and Seeding a Lawn

- When overseeding, the time line for NoMowGrass to take over is dependent upon your soil conditions, competing grasses and climate. Most lawns will see old grasses being crowded out over time. Depending on the type of lawn being reseeded, NoMowGrass can usually take over in 2 to 3 growing seasons.

Bag Size	Coverage (square feet)
2.5 kg	880 sq. ft.
5 kg	1760 sq. ft.
10 kg	3520 sq. ft.
