

## Canadian Made Products for Canadian Whitetail Deer

Our Food Plot blends have been field tested and proven to grow in tough Canadian growing conditions.

### FOOD PLOTS (Seed plantings for Deer) • Canada #1 Ground Cover Mixtures

Wildlife food plots are ideal for hunters who have a hot spot on their property or exclusive access to other private land. They are also great for habitat enhancement projects to improve available forage for wildlife. Food plots encourage antler growth and body mass throughout the year by utilizing special designed crops.

Sweet Success	Superb-uck	Field Edge	Walk N Toss	Upland/Turkey Blend	Amplified

Food and cover are two necessities sought after by the whitetail deer. This food plot provides both tonnage of food and up to a 7 ft. high cover that will give them security throughout the summer and fall. Made up of over 60% annuals, it is also a great mix for Wild Turkeys. Millets and Milo provide beneficial winter food source for turkeys with seeds standing high above the snow line.  5 lb. covers 1/2 acre 20 lb. covers 2 acres	A perennial based formula lasting up to 5 years. This low growing feed which contains clovers, chicory, alfalfa, and brassicas will provide for whitetails all summer long. Brassicas almost have a magic to them when winter hits; the chemical composition changes in the plant, making the plants sweet and driving the deer right to them for a late season hunting stand. It is recommended to reseed with Field Edge™ once a year.  5 lb. covers 1/2 acre 20 lb. covers 2 acres	Millets and Brassicas make up this 100% annual mixture which can be used for overseeding an existing plot or planting by itself for a late season hunting stand. The brassicas need a couple of cold frosts before attracting deer. This mix is a great fall planting for hand broadcasting into standing corn and soybean. When the crop is harvested the brassicas are still there for the deer.  2.5 lb. covers 1/3 acre 10 lb. covers 1 1/3 acres 20 lb. covers 2 2/3 acres	This hardy growing plot is ideal for attracting whitetails to areas such as log landings, four wheeler trails and secluded locations that are difficult to get equipment to. It is not recommended for large open fields. For a better stand in large fields we recommend planting our Superb-uck.  2.5 lb. covers 5000 sq. ft. 10 lb. covers 1/2 acre	Canadian winters can be really tough on Turkeys. It's not Spring time that you want to attract turkeys but the winter that you want to feed your local birds. Our Upland/Turkey Blend offers different levels of tall growing crops that will feed your turkeys from Fall right through until the Spring months. It not only offers food but cover from any predators in the area, and is also great for Doves, Quail, & Grouse.  5 lb. covers 1/2 acre 20 lb. covers 2 acres	Nothing has ever come close to such an attractive plot as Amplified by Rack Stacker Products. This perennial based blend of seeds offers 7 types of clover for year round forage for Whitetails and spring time attraction for turkeys. Fatten those fawns and give your local birds a place to go this summer. This mix works great as an overseed blend for existing plots. It's recommended that you plant Superb-uck the first year and then follow up the second year with Amplified.  1 lb. covers 1/3 acre 3 lb. overseeds 1 acre

### MINERALS (Great Spring/Summer item for attracting Deer) This is the ONLY product of its kind in the wildlife industry.

This highly attractive supplement is great for keeping deer on your property. It gives the deer much needed vitamins and minerals in their diet for the summer, while the bucks are in their antler growing period and the does are lactating milk for feeding the young fawns.

Mineral Fountains are better than traditional supplements. This new and exclusive Rack Stacker™ product enhances antler growth. Placed about eight feet up a 4-5" diameter tree stump, the fountain allows minerals to run down the trunk for up to a year.

Rack Stacker™ Mineral Fountains are concentrated minerals derived from Canadian soils. The minerals are supplied in a liquid formation by the rain on a natural part of the forest - the tree that you put it on.

The kit comes with everything needed to put it up - screws, 10 lbs. of mineral and a pre-drilled pail.

Little maintenance - just clean the leaves out in the fall and top up the mineral.

#### Glory Mineral

Increased Phosphorus and Calcium levels are ideal for bucks during the antler growing period.

#### Blaze Mineral

Simple and effective, year-round supplementation. Ideal for lactating does during the Spring.
